Portfolio

Professional Summary

Java Developer with hands-on experience designing and deploying production-ready backend systems using Spring Boot, Spring Security, JWT, MySQL, Redis, and Docker. Built and integrated REST APIs and secure backend architecture across independent projects, with cloud deployment experience on AWS. Sharpened algorithmic thinking and coding proficiency through consistent competitive programming problems. Actively seeking Java Developer roles to contribute to scalable, reliable software.

Education

Sri Sairam Institute of Technology, Chennai

2022 - 2026

Bachelor of Engineering (B.E) in Electronics and Communication Engineering

Sacred Heart Matriculation Higher Secondary School

2021 - 2022

Higher Secondary Certificate (HSC)

Technical Skills

Languages: Java, SQL, HTML, CSS, JavaScript

Frameworks & Technologies: Spring Boot, Spring Security, Spring Data JPA, Hibernate, JWT, OAuth2, Spring Mail

Databases: MySQL, Redis

Cloud & Tools: AWS (EC2, RDS, S3, IAM), Docker, Git, GitHub, Postman

Core Concepts: OOP, Collections Framework, Exception Handling, DSA, REST APIs, SDLC, Concurrency & Multithreading

Projects

Safe Share | *Spring Boot, JWT, Google OAuth2, Redis, Bucket4j, MySQL, Docker*

[GitHub](#)

- Built a secure file-sharing platform with JWT + Google OAuth2 authentication, password-protected share links, configurable expiry and download limits, and version-tracked file uploads (up to 25MB, 8 supported file types).
- Implemented automated PDF watermarking (via Apache PDFBox) stamping each download with the accessor's IP and timestamp, plus QR code generation for shareable links.
- Enforced Bucket4j + Redis rate limiting against brute-force link password attempts, with a scheduled cleanup job purging files after a 7-day grace period.
- Added bot/crawler detection across 7 platforms to exclude preview requests from download counts and analytics, with in-browser preview rendering for Word and Excel files.

Serve Flow | *Spring Boot, JWT, Google OAuth2, Razorpay Webhooks, SSE, MySQL, Docker*

[GitHub](#)

- Engineered a canteen billing system with a real-time engine that auto-matches static UPI QR payments to walk-in bills within a 10-min configurable rolling window.
- Designed a pessimistic-locking payment pipeline with 3-outcome matching (auto-matched, ambiguous, unmatched), webhook verification, and audit logging via MatchAttemptLog to prevent double-claiming.
- Integrated ESC/POS thermal printers via TCP socket for real-time hardware token printing, with automatic virtual print fallback when the physical printer goes offline.
- Delivered real-time bill updates to 100+ concurrent biller dashboard sessions using Server-Sent Events (SSE), a thread-safe connection registry, and event-driven state broadcasting.

Experience

Srishti Innovative Computer Systems Pvt Ltd, Trivandrum

Jun 2025 - Jul 2025

Frontend Development Intern

- Developed 5 responsive web pages using HTML5, CSS3 (Flexbox, Grid), and JavaScript with DOM manipulation and event-driven interactions for clean, structured user interfaces.
- Integrated frontend with backend APIs using Fetch API, async/await, and JSON parsing, enabling responsive data rendering and real-time UI updates.
- Troubleshooted and resolved 10+ frontend issues including event listener conflicts and layout inconsistencies through systematic debugging and UI testing.

Achievements

- Published the final-year project paper titled "Intelligent Water Safety Signal Transmitting System" in IEEE Xplore.
- Solved 1000+ coding problems on SkillRack to improve DSA, logical thinking, and programming skills.
- Led the team of 3 members during the final-year project by coordinating task distribution, workflow planning and timely execution.
